Field Connection Specifications (for FIO)

GS 33J60A20-01EN

[Release 6]

■ GENERAL

This GS describes the connection between the I/O Modules for FIO and field devices.

■ SIGNAL CONNECTIONS

● Variation of Signal Connections

The I/O Modules can be connected to field devices by terminal connection or with a terminal block via a KS cable interface adapter. A customer-furnished MIL cable can also be used to connect to the I/O Module.

The following explains the terminal blocks as well as the signal wiring that can be paired with the I/O Modules.

F02E.ai

● Configuration of I/O Module Connection

A pressure clamp terminal block is provided for the terminal connection with field devices. To expand terminals via terminal boards, connect a KS cable adapter to an I/O Module. When using a customer-furnished MIL connector cable, can directly connect to an I/O Module.

A dedicated terminal block is provided for a dual-redundant configuration.

□ is channel number.

*1: When power of models AAI141, AAI143, AAI841, AAI135 and AAI835 is off or abnormal, current input loop is in the open state.

Do not use current signals with other receiving devices. When in use, also use an external receiver resistance, in the voltage mode (Shunt resistant module part no.: A1080RZ 250 ohm).

*2: Wiring resistance for the signal cables of IN□A and IN□B must be identical.
